

Hi-tech Performance at High Speeds

Inspired by the Formula 1 tyres which are grooved to provide firm grip, Elgitex **G2** has a Pneumaflush technology in action that flushes out air from the surface of the spindle tape, to provide firm grip and minimal slip on spindles at high-speeds. Pneumaflush also prevents heat build-up during running. Our innovative technology has created a revolutionary grooved Spindle Tape **G2** that saves power and outperforms conventional spindle tapes.

The world's first grooved spindle tape **G2** with *Pneumaflush™* action *patented technology*. (Patent No. 222477)

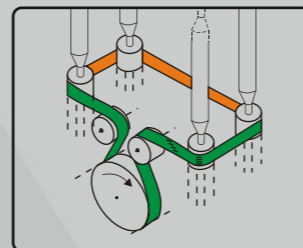

FEATURES

- Grooved rubber surface
- High modulus reinforced fabric
- Special grade NBR rubber
- Better flexibility
- Anti Statically Equipped

BENEFITS

- Prevents heat buildup
- Quick heat dissipation
- Minimum change in Jockey Pulley centre distance
- Consistent performance throughout Service Life
- Less fluff attraction
- Better yarn quality
- High Speed Operation
